Projects Outline

We're expecting for implementation of one simple IT project (Creating mini-Ichiba ecosystem). Project naturally contains four different modules:

1. mini-Ichiba website
2. Membership API
3. Points API
4. Payments API

You can split onto 4 groups as you wish, but we recommend to try to keep the same amount of people into each group.

For cross-service communication you should use REST APIs and JSON.

You can use any favorite programming language.

We will provide you access to Linux Virtual machines for development into Azure Cloud.

At any time you can ask questions about your task by asking via email address: tech-russia-hiring@mail.rakuten.com

mini-Ichiba is a one page application, which can show several item records (each item has infinite amount, and some cost).

User can "buy" item. To buy item he should follow a flow:
